Art Unit: 1711

 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

 Claims 1-9, 11, and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Lear et al. (*994). Art Unit: 1711

Lear et al. disclose the production of secondary hydroxyl group containing polyether polyols, having a terminal portion of oxypropylene repeating groups not exceeding 15 weight percent of the total polyol weight, and their use in the production of polyurethanes, wherein the polyol is produced by reacting propylene oxide with an initiator to yield an oxypropylated compound, which is then oxyalkylated with a mixture of ethylene oxide and propylene oxide to yield a product, which is ultimately oxyalkylated with only propylene oxide, in the presence of a double metal cyanide catalyst. See abstract and column 6, lines 29-54.

 Claims 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lear et al. (*994).

As aforementioned, Lear et al. disclose the production of secondary hydroxyl group containing polyether polyols, derived from sequential oxyalkylation reactions in the presence of a double metal cyanide catalyst. See paragraph 2 of this Office action. However, Lear et al. are silent regarding the step of reducing the ethylene oxide within the ethylene oxide/propylene oxide mixture during the course of the oxyalkylation reaction until only propylene oxide is being introduced. The position is taken that this process control operation amounts to an obvious processing step. Since the reference is concerned with an oxyalkylation process, wherein the transition from an ethylene oxide/propylene oxide mixture to a propylene oxide is desired; it would have been obvious to one of ordinary skill in the art (a process engineer) to meter the ethylene oxide and propylene oxide feed streams in such a way that ultimately only propylene oxide was being fed to the reactor for the final oxyalkylation step. Such a metering operation was

Application/Control Number: 10/049,335 Page 4

Art Unit: 1711

standard operation at the time of invention and would have provided a simplified and more efficient process.

4. Claims 10 and 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terms, "the mixture ..." and "the metered addition", lack antecedent basis from claim 1.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (703) 308-2982.
